The Metacognitive Teacher and Learner: Teaching to Think, Learning to Learn

An Introduction to Metacognition and its role in teaching and learning with particular reference to students with individual learning needs
Intended Outcomes

Participants will:

• be familiar with the full meaning of the term *Metacognition*

• know how general metacognitive approaches may be used to support thinking and learning, in all subject areas and for different age and ability levels

• understand and appreciate the relevance of *Metacognition* to students with individual or additional educational needs (AEN) at individual and collective level

• understand and appreciate the importance of metacognitive thinking in their role as reflective teachers

Special Education Support Service, 2013
Cognition

- Learning
- Understanding
- Questioning
- Remembering
- Concept forming
- Planning
- Imagining
- Problem solving
- Decision making
- Evaluating

‘Thinking has to be learned in the way that dancing is learned’
(Nietzsche)
Learning to Think: Senior Cycle

The ability to think critically and creatively, innovate and adapt to change, to work independently and in a team, and to be a reflective learner are prerequisites for life and for the workplace in the 21st century.

(Senior Cycle Key Skills Framework: p.2)
Cognition  →  Metacognition

- Metacognition refers to the active control of the thinking processes involved in learning

- It plays a critical role in successful learning

- Students with better metacognitive abilities tend to be more successful learners

Special Education Support Service, 2013
The Twin Aspects of Metacognition

- Knowing about Cognition
- Self-Regulation
Metacognitive Knowledge

Knowing about Cognition / Metacognition

- **Declarative Knowledge**
  - KNOWING ‘ABOUT’
- **Procedural Knowledge**
  - KNOWING ‘HOW TO’
- **Conditional Knowledge**
  - KNOWING ‘WHEN TO’
Metacognitive Self-Regulation

Self-Regulation

Planning
- PLANNING LEARNING

Monitoring
- MONITORING LEARNING

Evaluating
- EVALUATING LEARNING
### PLANNING

- What is our goal?
- What information do we need?
- What strategies can we use?
- What resources do we need?
- How much time will the task take?

### MONITORING

- Do we understand what we're doing?
- Is this strategy working?
- Are we making progress towards our goal?
- Are we answering the questions?
- Do we need to make changes?

### EVALUATING

- Did we reach our goal successfully?
- Did we need to change the approach that we began with?
- What worked? What didn’t work?
- Would we do anything differently next time?

---

Based on Schraw 1998: 121.

Special Education Support Service, 2013
Metacognition in Everyday Life!

- Consider for a moment how you use metacognition in your everyday life
- Think about your knowledge and understanding of your own thinking
- Think about ‘thinking strategies’ that you use in everyday life
- Consider times when you use metacognitive self-regulation
- Share your thoughts with your neighbour
The Importance of Metacognition (1)

• Content learnt in school may be quickly forgotten and may quickly become irrelevant

• The future is unpredictable

• We must equip students for this future by supporting them in becoming independent, critical, flexible and creative thinkers and learners

Special Education Support Service, 2013
The Importance of Metacognition (2)

- Metacognition fosters development.
- Students who have been taught metacognitive skills learn better.
- Students with good metacognitive skills are better critical thinkers, problem solvers and decision makers. (Bransford et al., 1986; Ewell-Kumar, 1999; Heath, 1983)
- Metacognitive training can increase students’ self confidence and sense of personal responsibility for their own development. (McCombs and Marzano, 1990; Schunk, 1990)
‘If one changes the tools of thinking available to the child, his mind will have a radically different structure.’

(E. Berg, Vygotsky’s Theory, p. 46)
Metacognition

• shapes active rather than passive learners
• gives students a sense of control over their learning
• enables learners to learn how to learn
• assists students in becoming self-directed learners
• promotes ‘deep learning’

‘…involvement in shaping their own learning can heighten children’s awareness of themselves as learners and encourage them to take more personal responsibility for, and pride in, their learning’. (NCCA, 2007).
Assessment for Learning and Metacognition

Assessment for Learning emphasises the role that the child can play in her/his own learning by:

- involving the child in deciding learning outcomes
- helping them to identify progress
- highlighting challenges
- reflecting on ways to improve in the future...
- metacognitive skills are key in supporting pupils’ own monitoring and evaluation of their work

Special Education Support Service, 2013
Learning Goals

Share the learning aim of each lesson and the learning intention in each task

Give clear success criteria for each learning task

Enable students to check and comment on each others’ work, using the success criteria

Encourage students, in pairs or small groups to engage in reflective evaluation of the work and learning they have done
Your mind *is* like a sponge that absorbs knowledge, but that’s *not exactly* how it’s done!

Teaching Metacognition

**STRATEGIES TO SUPPORT THINKING IN THE CLASSROOM**
Some Dimensions of Thinking

- Cognitive
- Enquiry Methods
- Modalities of Learning
- Dispositions
- Creativity
Some Strategies to Promote and Support Thinking in the Classroom

• Using Bloom’s Taxonomy to promote Higher Order Thinking
• Developing a common language of thinking
• Metacognitive Questions
• Enabling Authentic Classroom Discourse
• Ryan’s Thinkers Keys
Thinking in the Classroom: Using Bloom’s Taxonomy

- Remembering
- Understanding
- Applying
- Analysing
- Evaluating
- Creating

Special Education Support Service, 2013
Thinking in the Classroom: Bloom’s Taxonomy

- Model forming different levels of questions on different texts
- Ask students to make up their own questions, about texts or about the topics they are studying, at the different levels of thinking
- Ask students to identify the level of the question that they are going to answer before beginning work.
- Always model first
Thinking in the Classroom:

- What would happen if...? Rewrite the story from another point of view.

- Pick two images that in your opinion effectively convey the mood of the poem. Explain your choice.

- How does the writer...? What is the theme of this novel?

- What strategy could you use to...? Pick out three uses of figurative language...

- Explain why...; Write a brief summary; What was the main idea?

- Tell what happened; Can you name? How many...?
Thinking in the Classroom: Language

Thought is not merely expressed in words; it comes into existence through them

Thinking in the Classroom: Using the language

Examples of key words in teaching thinking and learning

Thinking, learning, understanding, teaching, mastering, persevering, wondering, rehearsing, practising, modelling, describing, telling, asking, exploring, investigating, imagining, creating, listening, choosing, deciding, planning, assessing, evaluating, demonstrating, explaining, remembering, talking, analysing, discussing, guessing, synthesising, predicting, suggesting, testing, sketching, checking, considering, reconsidering, reviewing, recalling, noting, noticing, summarising, hypothesising…

(Based on list from: Thinking about Thinking: Developing Metacognition in Children by Robert Fisher)
Thinking in the Classroom

An example of the use of metacognitive language and strategies displayed in Mercy Mounthawk Secondary School, Tralee.

(From the SESS Equality of Challenge Initiative)
Thinking in the Classroom: Using Metacognitive Questions

- Working in cooperative groups, ask students to generate questions about material that is being studied.

- Prompt students to create questions that correspond to the different levels of Bloom’s Taxonomy.

- Use fun questions as warm-ups to start thinking:
  - The answer’s ‘No there was a dog in it’ – what’s the question?
  - Which is heavier, love or hate?

- Use open questions that allow for a range of possible answers and which draw on higher order thinking (HOT).
Thinking in the Classroom: Using Open Questions

Open questions allow for a range of possible answers. They offer cognitive challenge and they also:

- encourage more flexible thinking
- test the limits of knowledge rather than one item of knowledge
- encourage better assessment of students’ beliefs
- offer the possibility to clear up misunderstandings
- result in unanticipated and unexpected answers
- encourage discussion and allow depth of discussion

It seems to me that this hypothesis may have some serious weaknesses..
Thinking in the Classroom: Patterns of Classroom Communication: Teacher-controlled Mode

Kuhn, *Education for Thinking* p.123

Special Education Support Service, 2013
Thinking in the Classroom: Patterns of Classroom Communication

Authentic Classroom Discourse

Kuhn Education for Thinking p.124

Well, I think that the effect of...

What factors would you change....?

KWL Grids

Strategies to support critical use of the Internet
Metacognitive Self-Regulation: Planning and Monitoring

Self-Questioning

- Model self-questioning, using questions similar to the ones in the regulatory checklist when carrying out teaching/learning tasks
- Prompt students to self-question when they are carrying out tasks and encourage them in their effort to answer these questions
- Monitor students working in cooperative groups and prompt to self-question
Metacognitive Self-Regulation: Planning and Monitoring
Modelling and Supporting Self-Checking

○ **Before an activity:**
  - ‘What strategies will help us to learn in this lesson?’
  - ‘How should we plan this?’
  - ‘How long do we need?’
  - ‘What resources do we need?’

○ **During an activity:**
  - ‘Is this going well?’
  - ‘Do we need to change how we’re thinking about this?’
Metacognitive Self-Regulation: Planning and Monitoring

SQ4R Strategy

‘A metacognitive road map for reading and studying’

S: Survey
Q: Formulate Questions
R: Read and note answers to questions
R: Relate, make connections to what you know
R: Recall - summarise, pick out main points
R: Review

(SESS, 2009: page 42)
Metacognitive Self- Regulation: Planning and Monitoring

Self-Evaluation Matrices

- Support students in becoming familiar with using specific strategies effectively

- The teacher introduces one strategy at a time, modelling, teaching and then supporting students in using it.

- Students have a chance to practice each new strategy consistently

- Time is given regularly for students to reflect on when and how they have used the strategies

(SESS: Metacognition in the classroom, p.23 ff)
### Metacognitive Self-Regulation: Planning and Monitoring

#### Part of a Strategy Evaluation Matrix (SEM)

Metacognitive Self-Regulation: Planning and Monitoring Using Graphic Organisers

The Three Billy Goats Gruff

MAIN CHARACTERS:
3 Goats
An Ugly Troll

WHY DID THEY GET INTO DIFFICULTIES?
They wanted to get some sweet grass to eat.

HOW DID THEY SOLVE THE PROBLEM?
They tricked the Troll.

The Three Little Pigs

MAIN CHARACTERS:
3 Pigs
A Wolf

WHY DID THEY GET INTO DIFFICULTIES?
They were told to go out into the world because they were too big to stay at home any longer.

HOW DID THEY SOLVE THE PROBLEM?
The third little pig was too clever for the wolf.
Metacognitive Self-Regulation: Planning and Monitoring

**PMI – Plus Minus Interesting**
(Edward de Bono, *De Bono’s Thinking Course*, 1982)

- Three column grid labelled ‘Plus, Minus, Interesting’
- Draws attention to the positive, negative and interesting aspects of any question or problem
- Helps the student to make decisions quickly
- Encourages the widening of perspectives
### Metacognitive Self-Regulation: Planning and Monitoring

#### Consider a Proposal to have One Hour of P.E. Daily

<table>
<thead>
<tr>
<th>PLUS</th>
<th>MINUS</th>
<th>INTERESTING</th>
</tr>
</thead>
</table>
| Students would be a lot fitter.  
It might help to prevent health problems such as back and neck problems and obesity.  
Physical exercise releases endorphins and serotonins in the brain, so students would be more relaxed, so they’d learn better. | PE facilities would have to be extended so that several classes could be engaged in PE at the same time  
Some subject/s would almost certainly have to be dropped as there would be less time.  
PE gear would wear out faster – more expense for parents. | What subject/s should be dropped?  
Would it result in a happier school?  
Should teachers have to do the one hour of PE daily too? |
### Metacognitive Self-Regulation: Planning and Monitoring

Metacognitive Self-Regulation: Planning and Monitoring

Edward de Bono: CoRT

- PMI (Plus, Minus, Interesting)
- CAF (Consider all Factors)
- FIP (First Important Priority)
- OPV (Other People’s Views)
- De Bono’s Thinking Hats

Special Education Support Service, 2013
De Bono’s Thinking Hats

- **BLACK** - Caution, judgement, assessment. Is this true? Will it work? What are the weaknesses? What is wrong with it?
- **WHITE** - What information do we have? What questions do we need to ask?
- **YELLOW** - Why is this worth doing? What are the benefits?
- **GREEN** - Creativity, new ideas.
- **BLUE** - Organisation of thinking. Metacognition
- **RED** - Emotions, intuition. Emotions. Intuition, feelings, and hunches. No need to justify the feelings. How do I feel about this right now?
Metacognitive Self-Regulation: Planning and Monitoring

K-W-L Grids

Useful in:
- Planning and taking study notes
- Project organisation
- Essay writing

Help to:
- Activate prior knowledge
- Think and plan
- Record
- Review
- Reflect on learning

Special Education Support Service, 2013
### Metacognitive Self-Regulation: Planning and Monitoring

**KWL Grids – Researching Number**

<table>
<thead>
<tr>
<th>K</th>
<th>W</th>
<th>L</th>
</tr>
</thead>
</table>
| **NATURAL NUMBERS**  
We use these all the time. For example: 1, 4, 6, 7, 59… | How many kinds of numbers are there?  
Is there a special group for minus numbers?  
Is there a group for fractions? | Numbers are listed in SETS. There are 5 different SETS:  
1. Number Sets  
2. Intervals  
3. Density Properties  
4. Representation Properties  
5. Transcendental Numbers  
**Number Sets (1)** include **Natural Numbers** and **Whole Numbers** as well as:  
**Integers** include ZERO as well as negative (‘minus’) numbers.  
**Rational Numbers** are fractions (ratios) of Integers. Zero can not be the bottom number.  
**Real Numbers**  
Nearly every number is a real number, including Integers, Natural Numbers, Whole Numbers and Rational Numbers. |
| **WHOLE NUMBERS**  
These are the same as Natural Numbers but they include Zero as well. For example: 0,1,5,65,99… | |  |

**Still Want to Know**

What numbers are not Real Numbers? What are Intervals, Density Properties, Representation Properties and Transcendental Numbers? Why are there so many sets – why not just give one name to all numbers that are not Real Numbers?

*Special Education Support Service, 2013*
Metacognitive Self-Regulation: Planning and Monitoring

Critical Use of Internet Technology

- Analysing, evaluating and synthesising information from the web
- Developing the ability to understand, appraise and integrate information from many different sources
- Initially they need assistance to sort out the ‘information glut’
- Print and Internet record sheets can help

(Working with Differentiating the Curriculum by Caroline Coil : p.17-18)
Metacognitive Self-Regulation: Planning and Monitoring

STRATEGIES TO SUPPORT REFLECTION AND EVALUATION

Special Education Support Service, 2013
Metacognitive Self-Regulation: Reflection and Evaluation

Reflective Learning Cycle

Deciding how to incorporate improvements into next experience
What will I do differently next time?

Experiencing
Doing something in class, in school, out of school

Formalising what is learned
What do the results imply
How did I influence it?

Having time to think about the experience
What happened?

Adapted from Kolb, 1984 (SESS, 2009: p.11)

Special Education Support Service, 2013
Metacognitive Self-Regulation: Reflection and Evaluation
Modelling and Supporting Self-Checking

After an activity:

▪ ‘What kind of thinking did we do?’
▪ ‘How did we do our thinking?’
▪ ‘Did we have a plan? A strategy?’
▪ ‘Was our thinking good/effective?’
▪ ‘How could we improve our thinking next time’
▪ ‘Can we use this approach in another area?’

Special Education Support Service, 2013
Metacognitive Self-Regulation: Reflection and Evaluation

Using Rubrics

• May be drawn up and used by either teacher or student

• May be used for a very wide range of purposes

• Assist objective evaluation and self-regulation
## Metacognitive Self-Regulation: Reflection and Evaluation

### Quotes

*Children who have limited experience with books and other literary related materials, need an especially rich literary environment in school. The classroom needs to be a safe place where students feel comfortable and encouraged as they experiment with varying uses of their developing literacies.*

### Notes

*This made me think of the children, particularly those who don’t speak English, who do not get the opportunity to have their parents read to them on a regular basis. It made me think about ways I could set up my classroom to promote literacy for all my students. Some things I want to do are to have a good classroom library, to provide sustained silent reading each day, to have a cross-age reading programme where the students will be reading buddies, and to have guest readers from the community and the students’ families come into the classroom and share their favourite books.*
Metacognitive Self-Regulation: Reflection and Evaluation

Adaptive Metacognition (CEBLE)

(Lin, Schwartz and Hatano, *Towards Teachers’ Adaptive Metacognition* [2005])

Special Education Support Service, 2013
Teaching Metacognitively

METACOGNITION AND STUDENTS WITH ADDITIONAL LEARNING NEEDS
Metacognition and Individual Learning Needs: Mild General Learning Difficulties

- Many students with mild cognitive difficulties have poor short-term memory.
- This can cause difficulties in:
  - self-organisation
  - thinking
  - understanding and planning tasks
  - remembering strategies
  - monitoring and evaluation performance
- Modelling, teaching and supporting the development of metacognitive skills helps these students to overcome difficulties caused by poor short-term memory.
Metacognition and Individual Learning Needs: Feuerstein’s Instrumental Enrichment

(Metacognition and Pupils with MGLD)

- Real tasks were given
- The students had to explain how they did it
- They were asked to give advice on how to succeed with such tasks
- They had to name the strategies
- The teacher used the students’ names for these strategies
- Students were asked to ‘bridge’ from this learning to other applications: ‘Where else might you be able to apply this?’

Special Education Support Service, 2013
Metacognition and Individual Learning Needs: Dyslexia

The development of explicit awareness and knowledge is important at all stages.

Learners with dyslexia should, from the outset, be encouraged to be reflective, observant and exploratory in their learning.

A metacognitive approach encourages the development of problem-solving strategies.

Many students who are Dual Exceptional have dyslexia.

(Based on Snowling and Stackhouse, 2006: pages 208-9)
Metacognition and Individual Learning Needs: Exceptional Ability

- Exceptionally able students are not always, or even often, effective learners:
  - They may have good metacognitive knowledge but may not be able to self-regulate.
  - Having a good working memory may mean that they bypass the planning of tasks.
  - Planning and monitoring performance may increase the ability to choose and apply skills and strategies more consistently and effectively.
  - Learning to reflectively evaluate task performance is an essential part of learning to value failure.

Special Education Support Service, 2013
Metacognition and Individual Learning Needs: Exceptionally Able Students: Self-Directed Learning

- Exceptionally able students may work at a faster pace than their classmates

- These students may require individualised programmes

- Independent study must have clear goals and targets

- The metacognitive and study/thinking skills necessary for this independent study must be modelled, taught and supported
Metacognition Benefits all Students

- Researchers like Reuven Feuerstein (1980) believe that children fail because they do not have the appropriate tools for learning.

- They can be taught such skills in order to facilitate success therefore.

- Metacognitive work may well be a case of extension for all… since all pupils can benefit from it (Deborah Eyre, 1997: p. 66)
Teaching Metacognitively

THINKING ABOUT THINKING - ABOUT OUR THINKING AND TEACHING

Special Education Support Service, 2013
Teaching Of, For and About Thinking

**Teaching of Thinking**
Teach the vocabulary of thinking. Directly demonstrate, model and explain thinking.

**Teaching About Thinking**
(Use a variety of narratives to provoke, develop and reflect on the nature of thinking – for example, Philosophy 4 Children)

**Infusion of Thinking**
- Restructure or redefine lesson content to develop and focus on thinking skills
- Use pedagogical strategies and materials to emphasise thinking during learning

**Teaching For Thinking**
Use methods which promote thinking in the context of the curriculum (e.g. CA Programmes)

**Strategic thinking and learning**
Remodel pedagogic tactics and approaches to explicate content, the nature of thinking and associated cognitive processes and thinking processes.

Special Education Support Service, 2013
